Memo to File:

Re: Dunn Mine
ACT/037/017

On December 7th, 1977 a field inspection of this operation was performed by Ron Daniels, Mike Thompson and myself. We were accompanied by Mr. Brad Clark of Atlas Minerals.

We looked at the new location of the access road and the powder magazine structure and did not observe any significant impacts as a result of these amendments.

The access road fill is comprised of waste rock from the Calliham and Sage Mines which are operated by Atlas Minerals.

The site is still under preparation with several acres of disturbance. Present were one (1) building, two (2) trailers, some equipment, a waste rock pile and a topsoil stockpile. The mine portal was still under construction.

In general, the operation appeared to be going according to plan.
